

VOICE-LED CO-OP RESCUE

Talk Me Home.

You have the map.

Pip has eyes and hands.

Explore through conversation.

Choose the route. Confirm the action.

Goal 005 · one final-candidate Voice pass

Original cover illustration · not gameplay

Neither partner has the whole picture.

Three chapters: Cargo Bay → Relay Gallery → Return Dock.

MISSION CONTROL

Read private documents.

Choose a route.

Set remote equipment.

Confirm each exact physical proposal.

PIP

Observe nearby rooms.

Report what is known.

Propose a local action.

Looking and checking need no permission.

The server validates the current conditions. Spoken agreement does not press Confirm.

Let a report change your plan.

Distinct emblems. Fixed compass. Circuit patterns. Your own route marks.

The screenshot displays the 'Talk Me Home' game interface. The top navigation bar includes 'Talk Me Home', 'Rescue Mission', 'Settings', 'About & privacy', 'Practice', and 'Restart'. The main header shows 'Relay Gallery' with a progress indicator: 'Cargo Bay Cleared', '02 Relay Gallery Current chapter', '03 Return Dock Ahead', and a 'Standard layout' button. The left panel contains 'MISSION CONTROL / 02 Remote Relay' with 'Acknowledged: Off' and buttons for 'Off', 'Beacon', and 'Harbor'. Below this is the 'Relay Gallery atlas' showing a circuit diagram with nodes: Ring (Entry), Fork, Leaf, Harbor, Beacon, Sail, and Dock (To Return Dock). The map includes a compass and a legend for 'Planned' (dashed line) and 'Player-marked explored' (dotted line). The right panel shows a chat window for 'Pip UNIT 04' with a 'Practice' button and a message: 'I am in a safe room with the Ring emblem. A fixed compass mark points north. East gate is closed. I can inspect a reachable gate to check the opening.' Below the chat is a 'Move to the far-side platform' status bar and buttons for 'Interrupt' and 'Pause mission'. At the bottom, there is a 'Type a message' field and a 'Send' button.

PLAN

Mark a corridor.

Revise the plan.

COMPARE

Keep explored paths and
reported obstructions
distinct.

Exact words, with their source and age.

A report is a communicated claim, not a live sensor reading.

The left screenshot displays the 'Mission Control documents' interface for the 'Relay Gallery atlas'. It features a map with various locations: Ring, Beacon, Fork, Harbor, Sail, Leaf, and Dock. A legend indicates 'Planned' (dashed line), 'Player-marked explored' (dotted line), and 'Location unknown until you mark it' (solid line). Below the map, a 'Last report' section shows a report from 'Pip' dated 08:38:18 PM. The report text is: 'I am in a safe room with the Ring emblem. A fixed compass mark points north. East gate is closed. I can inspect a reachable gate to check the opening.' Below the report, there are buttons for 'Check surroundings', 'Repeat report', and 'Remove association'. The right screenshot shows a 'Your partner' chat window with a robot icon. It displays a message from 'Pip' dated 08:38:18 PM, which is identical to the report in the left screenshot. The chat window includes buttons for 'Practice', 'Interrupt', 'Pause mission', and 'Send'.

Keep the quote.

Attach it to a room or corridor.

The association belongs to you.

Recheck what changed.

Relay changes age gate notes.

Stable clues remain historical quotes.

Ask for a fresh surroundings report.

A blocked passage can change the route.

Real Voice attempt 12: a backtrack, a recovered request, and confirmed home.

ONE COMPLETE RESCUE

Eleven exact confirmations.

Useful arrival reports.

A way around blocked cargo.

Home, playback drain and
ending ACK observed.

Home reached. Reliability still needs work.

CURRENT EVIDENCE

One final-candidate Voice rescue reached home with 11 exact confirmations and an ending ACK.

A second run stalled in the Gallery without an ACK. The two-pass target remains unmet.

LOCAL PROTOTYPE

Playable Rescue and Training.

No public demo is deployed.

No upload or event entry is submitted.

Synthetic QA is not a human playtest or physical-device test.
