

A VOICE-LED CO-OP RESCUE GAME

Talk Me Home.

You have the map.

Pip has eyes and hands.

Share clues. Choose a plan.

Confirm each proposed action on the console.

Original game artwork · local submission draft

Original cover illustration · not gameplay

Neither partner has the whole picture.

Conversation connects a reference map with a local point of view.

MISSION CONTROL

Read the documents.
Control remote equipment.
Confirm one exact proposal.

Private notes stay at your desk.

PIP

Observe nearby equipment.
Inspect without permission.
Propose a local action.

No automatic view of your map or notes.

A proposal communicates intent. Only a confirmed, server-validated action changes the world.

One rescue. Three ways to cooperate.

New deterministic Practice captures · the same explicit confirmation boundary

01 Cargo Bay

Reason about shared machinery and remote Power.

02 Relay Gallery

Compare spoken clues with an atlas. Rethink the route when blocked.

03 Return Dock

Coordinate charging and readiness. Authorize the return separately.

Talk with Pip. Confirm on the console.

Current Practice UI · spoken “yes” does not execute an action

1

Conversation

Share a clue or request.

2

A specific proposal

Read the exact action.

3

Human confirmation

Confirm, or choose Not yet.

4

Verified result

The server rechecks conditions.

An implemented game. A clearly scoped result.

BUILT

React + TypeScript
Node game server
AssemblyAI Voice API

Exact proposals, owner decisions
and faithful captions.

OBSERVED IN REAL VOICE

0 unconfirmed commits
1 confirmed Latch action
Remote end
acknowledged

Synthetic voice + UI confirmation.
Stalled before the Cargo crossing.

VERIFIED OFFLINE

Both Gallery variants
Dock and confirmed
home
Bounded recovery
cases

Practice and explicitly fake peers.
Not a real model pass.

Full Live Rescue verification remains pending.

A small robot. A shared way home.

PLAYABLE LOCALLY

Three-chapter Rescue and optional Training.

Next: evaluate natural play and explore more authored episodes.

Public demo URL: not deployed.

Full Live acceptance: pending.

Upload and event entry: not submitted.

Practice ending shown · a product direction, not a claim of customers, revenue or measured fun
