

COOPERATION THROUGH CONVERSATION

Talk Me Home.

You hold the plans.

Pip has eyes and hands.

Share clues. Revise your route.

Bring your partner home.

Local prototype / Goal 007 / release evidence pending

A route is a hypothesis.

The screenshot displays the 'Talk Me Home' game interface. The top navigation bar includes 'Talk Me Home', 'Rescue Mission', 'Settings', 'About & privacy', 'Practice', and 'Restart'. The main header shows 'Relay Gallery' with a mission objective: 'Match your map with Pip's local clues to find the Dock.' Below this, the 'MISSION CONTROL / 02' panel features a 'Remote Relay' section with 'Off', 'Beacon', and 'Harbor' buttons. The 'Beacon' button is selected. The 'Mission Control documents' section shows the 'Relay Gallery atlas' with a map of the 'RELAY GALLERY CIRCUIT & WAYFINDING ATLAS'. The map includes locations like Ring, Fork, Harbor, Beacon, Sail, Leaf, and Dock, connected by circuit lines. A legend indicates 'Planned' (dashed line) and 'Player-marked explored' (dotted line). The bottom right panel shows the 'Your partner' interface with 'Pip UNIT 04' and a 'Practice' button. The 'Game event' section shows 'Move through the east gate: completed after your confirmation.' and a 'History (12)' button. The 'Type a message' section has a text input field and a 'Send' button.

CURRENT PRACTICE / player-marked route / no live location marker

Read the plan

Your atlas shows connections.
Pip reports what is nearby.

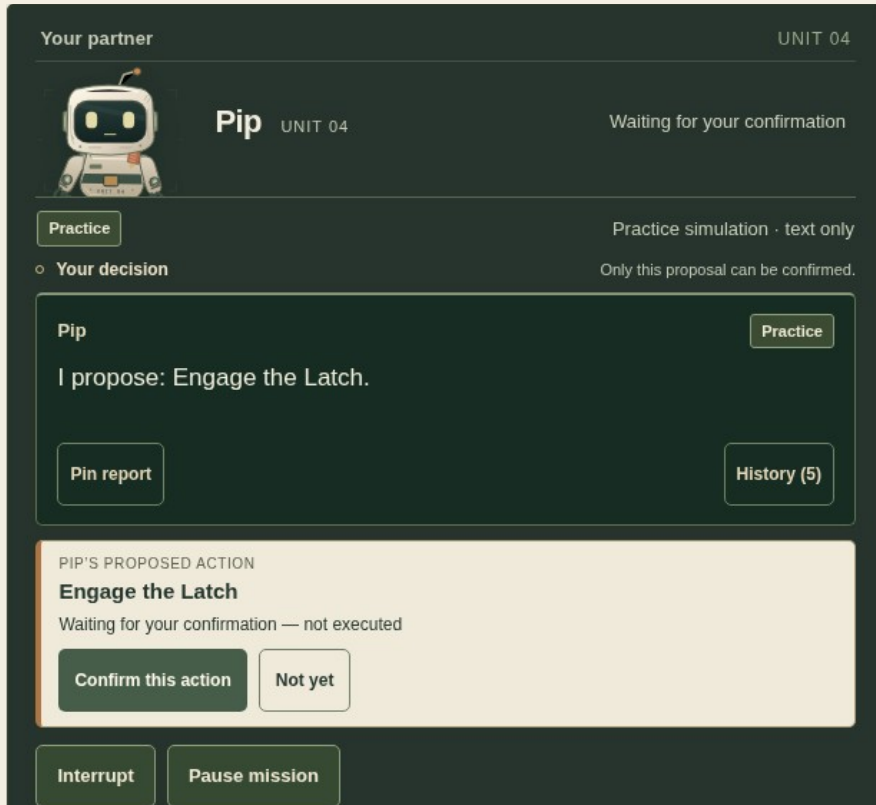

Compare the evidence

An open gate can still be
blocked. Ask before
committing.

Revise together

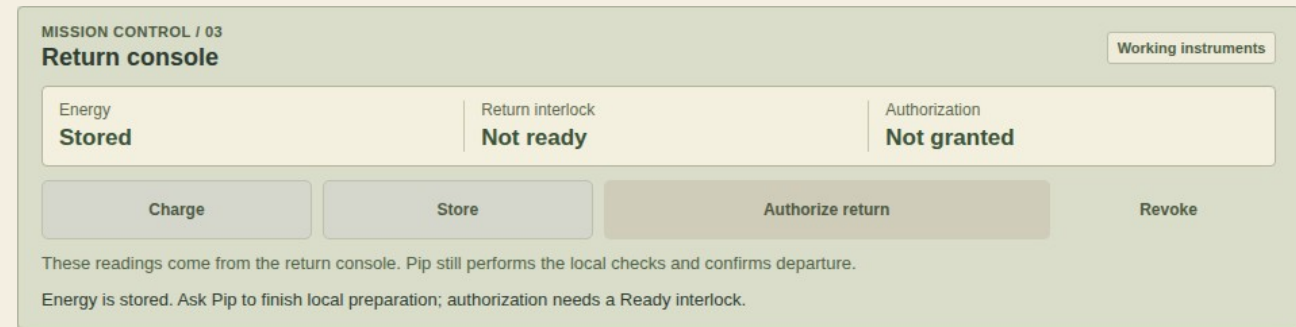

Choose another path and
confirm the exact move.

Say it. Read it. Confirm it.

**Pip proposes a physical action.
You choose whether it happens.**

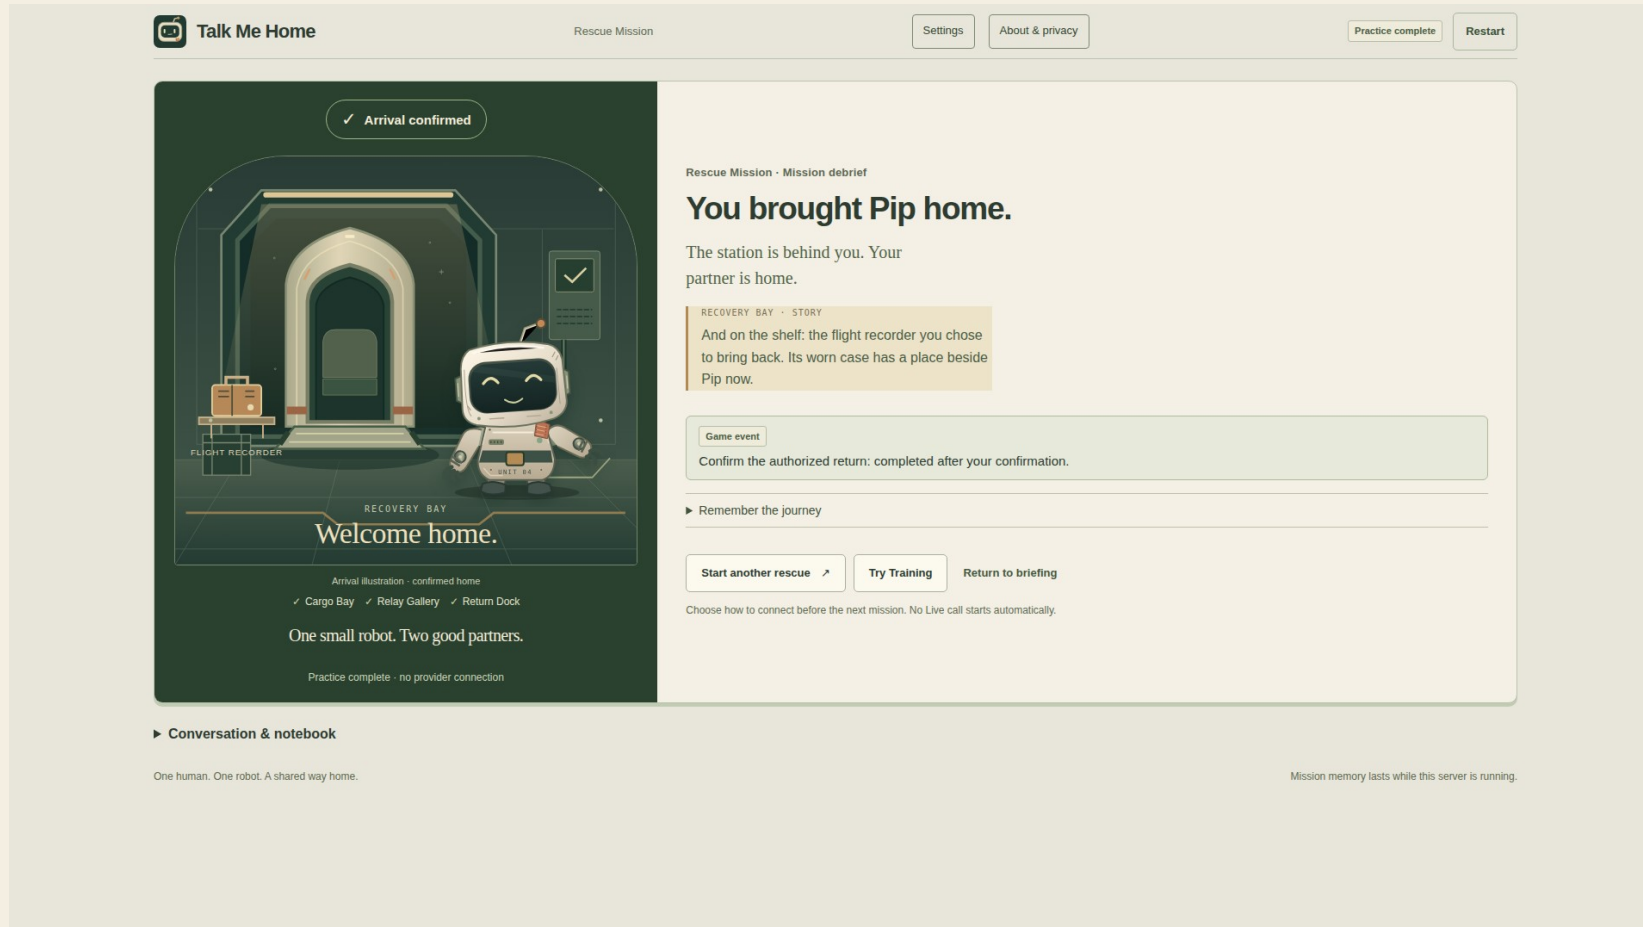

A spoken yes is not a console confirmation. The server checks the current state again when you confirm.

At the Dock, Pip holds the contact while you charge and store energy. Returning still needs a separate grant.

CURRENT PRACTICE / exact pending proposal at left / acknowledged Dock instruments at right

A small memory can come home too.

Choose the detour

The Leaf archive is optional. A direct rescue is complete too.

Ask about the case

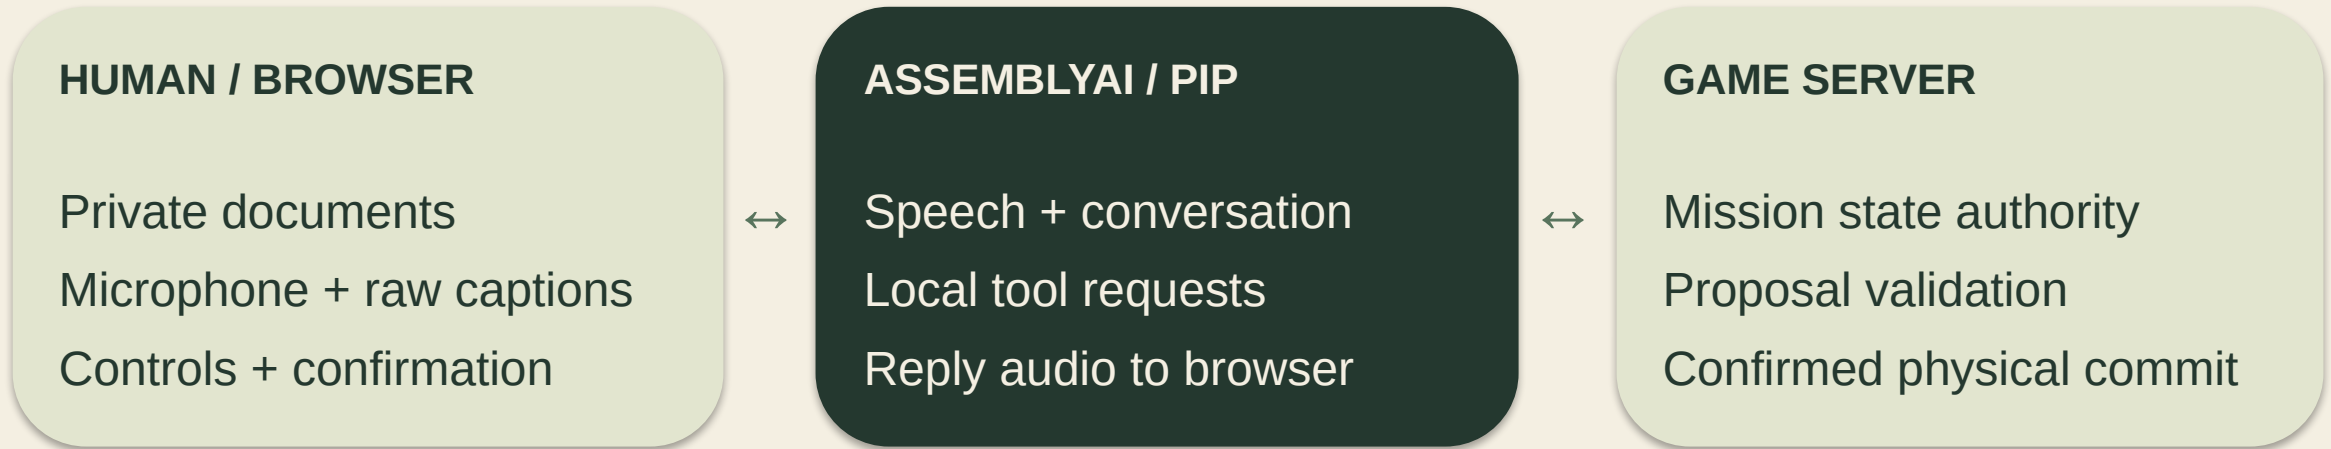

A worn label and faded star give the object a local story.

Give it a place

After a confirmed pickup and return, the case appears beside Pip.

CURRENT PRACTICE / confirmed home / optional recorder secured

A conversation. A guarded action.

Observe → share a clue → propose → exact human confirmation → validate → act

Separate knowledge

Private map marks stay with the human.

Separate authority

Conversation alone cannot commit an action.

TypeScript · Node.js 24 · React · Vite · Web Audio · Playwright / tool requests are routed through the browser

A working prototype, with a clear next gate.

READY LOCALLY

Practice and Training
Rescue + optional recorder
Exact confirmation + recovery
Four screenshots + editable deck

PENDING RELEASE EVIDENCE

Public HTTPS access: pending
Current Live acceptance: pending
Source: Private; historical disclosure
pending
Final current Voice video: pending

An earlier build completed one real Voice rescue; another run stalled. That history remains preserved and is not a current-build acceptance result.

Screens shown here are deterministic Practice. No new human playtest or enjoyment result is claimed.
